SOFTWARE ENGINEER

Software Engineer II with hands-on experience developing, testing, and supporting enterprise applications across financial technology, full-stack development, and production systems. Strong working knowledge of C#, .NET, SQL, React, C, and Java, with experience learning complex modern and legacy systems quickly. Skilled in troubleshooting production issues, validating releases, collaborating with technical and non-technical stakeholders, and delivering reliable software in Agile/Scrum environments. Quality-focused engineer with AWS cloud awareness, AI-assisted development experience using GitHub Copilot and LLM workflows, and an interest in application modernization, scalable architecture, and long-term system maintainability.

CORE COMPETENCIES

Production Systems Support | Full-Stack Development | Technical Ownership | Agile/Scrum Delivery | Cross-Functional Collaboration | Architecture-Minded Engineering | Application Modernization | Cloud & AWS Awareness | SQL/Data-Driven Troubleshooting | Quality-Focused Development | AI-Assisted Engineering

TECHNICAL SKILLS

Languages: Java, C, C#, JavaScript, Python, C++, HTML/CSS

Frameworks & Libraries: React, React Native, ASP.NET, Django, Bootstrap, Tailwind CSS

Databases & Data Tools: SQL, MySQL, SQLite, Firebase, Splunk

Platforms & Systems: Stratus OpenVOS, Linux, AWS, Windows Forms, Xamarin

Tools & Practices: Git, REST APIs, SSH, SFTP, Agile/Scrum, SDLC, production support, release support, debugging, testing, code reviews, LLM-assisted workflows, GitHub Copilot

PROFESSIONAL EXPERIENCE

JPMORGAN CHASE & CO, Tampa, FL

November 2022 – August 2026

Software Engineer II

Delivered C-based development, testing, and maintenance for Stratus OpenVOS payment-processing applications, completing an average of 8 story points per two-week Agile sprint in a regulated financial technology environment.

- Validated monthly after-hours production releases using SQL, Splunk, and OpenVOS to confirm successful code installation, expected system behavior, and production readiness for enterprise payment-processing applications.
- Resolved production issues during quarterly on-call rotations by researching system behavior, analyzing logs and application data, answering technical questions, and responding to incidents within a 15-minute on-call response window.
- Received JPMorgan Chase recognition for contributing to PCI 4.0 compliance modernization efforts.
- Built Jenkins-driven Java/Cucumber workflows to automate cross-engine payment testing, manage 8 Stratus vendor authorization lines, and extract transaction logs for validation.
- Increased development efficiency by 60% through applying GitHub Copilot and LLM-assisted workflows to analyze code, identify patterns, troubleshoot issues, and evaluate solutions.

WILEY EDGE, Tampa, FL / Remote

August 2021 - November 2022

Consultant Software Engineer

- Completed an 8-week training program focused on C programming, Linux, and banking terminology.

- Earned conversion to permanent JPMorgan Chase employment within 7 months of client placement by delivering Stratus OpenVOS development, testing, troubleshooting, and production support.
- Converted from consultant placement to permanent JPMorgan Chase employment in Nov 2022.

SELF-EMPLOYED, Remote

March 2021 - August 2021

Freelance Software Engineer

- Built a telehealth portal in two months using React and Tailwind CSS based on a design outline provided by the client.
- Created an SMS-based quiz application in two months using React for user sign-up and JavaScript for server-side logic.
- Secured 2 freelance software development projects through Upwork, communicating directly with clients to clarify project expectations.

TENEX SOFTWARE SOLUTIONS, Tampa, FL

January 2020 - March 2021

Software Engineer

- Delivered full-stack development for Tenex polling software and POMS systems while completing an average of 4 work items per day.
- Maintained full-stack components across 7 election workflow applications using ASP.NET, MySQL, Visual Basic, JavaScript, HTML, and CSS.
- Improved appearance, readability, and responsiveness of election workflow applications used by 350+ jurisdictions across 21+ states.

ADDITIONAL TECHNICAL EXPERIENCE

IDEAS WORTH CODING, Tampa, FL

October 2019 - December 2019

Software Intern

- Developed 2 React Native mobile applications from scratch, creating client-facing functionality and resolving UI issues during initial app delivery.

CARRT LAB, USF, Tampa, FL

March 2019 - December 2019

Undergraduate Researcher

- Created a 5-channel BCI-controlled wheelchair system prototype from provided hardware by integrating Unity, C#, C++, Arduino, and Bluetooth communication.

EDUCATION

Bachelor of Science, Computer Science

University of South Florida, Tampa, FL

CERTIFICATIONS

AWS Certified Cloud Practitioner

Active through Mar 2029
